MICHAEL F. NEWELL

Washington, DC • TS/SCI w/ Full Scope Polygraph

inbox@mfniv.com • 202-669-3067

Background

Mike Newell is a Warrant Officer and signals intelligence professional with over 13 years of experience across the U.S. intelligence community. His career spans tactical SIGINT operations in deployed and austere environments, intelligence support to special operations forces, national-level cyber mission analysis at U.S. Cyber Command, and strategic intelligence production within NSA programs. He has served at every echelon of the intelligence enterprise from forward-deployed tactical collection to national-agency analysis producing high-priority intelligence reporting, conducting adversary network analysis, and advising senior leadership on emerging technology integration.

Mike now focuses on applied artificial intelligence, building systems that bridge the gap between mission operations and modern AI/ML capability. He advises leadership on generative AI applications within operational workflows and has built custom data dashboards, automated reporting pipelines, and synthetic training environments. He brings a practitioner's understanding of how intelligence is collected, processed, and exploited — and where current tools fall short.

Technical Skills

AI/ML Systems: Retrieval-Augmented Generation (RAG), prompt engineering & evaluation, agentic AI workflows, vector databases & embeddings, LLM integrations (Claude, GPT-series, open-source models), AI-assisted development environments

Programming & Data: Python (Pandas, NumPy, Matplotlib), SQL, FastAPI, data visualization & analytics, advanced scripting & automation

Infrastructure: Git/GitHub, Firebase, Vercel, Google Cloud, Cloudflare, API integrations

Mission Systems: Ask Sage, Advana, NSA & USCYBERCOM analytic platforms, SIGINT/EW mission systems, upper-enclave operational environments

Education & Certifications

M.S. Data Analytics — University of Maryland Global Campus (expected Spring 2026)

B.S. Management Studies, Magna Cum Laude — University of Maryland Global Campus

A.A. Russian — Defense Language Institute, Monterey, CA

Certifications & Training: Certified Ethical Hacker (CEH) • CompTIA Security+ • CompTIA Network+ • 240+ hours NCS coursework • JQR Target Analyst Reporter (USCYBERCOM)

Applied AI & Development Projects

GovCon AI Copilot

Designed and built a retrieval-augmented AI assistant enabling government contractors to query FAR, DFARS, CMMC, and NIST frameworks in plain English, returning source-cited answers grounded in 46 indexed regulatory documents. Implemented persona-scoped retrieval, compliance matrix generation, and RFP requirement parsing. Architected for SaaS, white-label, and air-gapped deployment.

AI Relationship Intelligence Platform

Designing an AI-assisted relational memory platform that captures unstructured voice and text inputs, extracts durable person- and context-level intelligence, and supports long-term recall across relationships. Developed the product thesis, governance model, and rule-based enrichment approach for explainable, user-controlled relational infrastructure.

Agentic Framework Development

Architecting an experimental agent framework implementing custom FastAPI backends and persistent state management to support AI-assisted workflows across SMS and application interfaces. A novel idea- until OpenClaw.

Portfolio Rebalancing Web Application

Designed and deployed a full-stack portfolio rebalancing application integrating ML-driven financial logic and automated workflows. Led architecture and implementation end-to-end.

AI-Driven Email Visualization & Workflow Automation

Developed an AI-assisted system for high-volume email organization, leveraging LLM workflows to automate categorization, summarization, and information visualization.

4X Strategy Game — Systems Prototyping

Designed and developed a browser-based strategy simulation demonstrating rapid prototyping of complex rule-based systems using AI-assisted development workflows.
